Fitting instructions:

Loose exhaust pipe protective cover and remove end cap stickers from assembling points. Put M10x130 bolts from the outside side of beam. First of all put lashes on these bolts and then put distance tubes L=95mm onto bolts too. Such prepared lashes with bolts put into beam in the way so they do not overlap on the other side of beam. If it is necessary, adjust overleaping exhaust pipe bracket.

Put coupling device on inner side of car beams and put bolts through coupling device. Bolt coupling device to car by using flat, spring washers and M10 nuts and tighten whole coupling device according to torque moments. Cut out slot according to template in bottom horizontal part of bumper.

Install wiring. It must be up to standard and fulfil all manufacturer's requirements.

Put all dismantled parts back.

Then check all bolt joints.

General instructions:

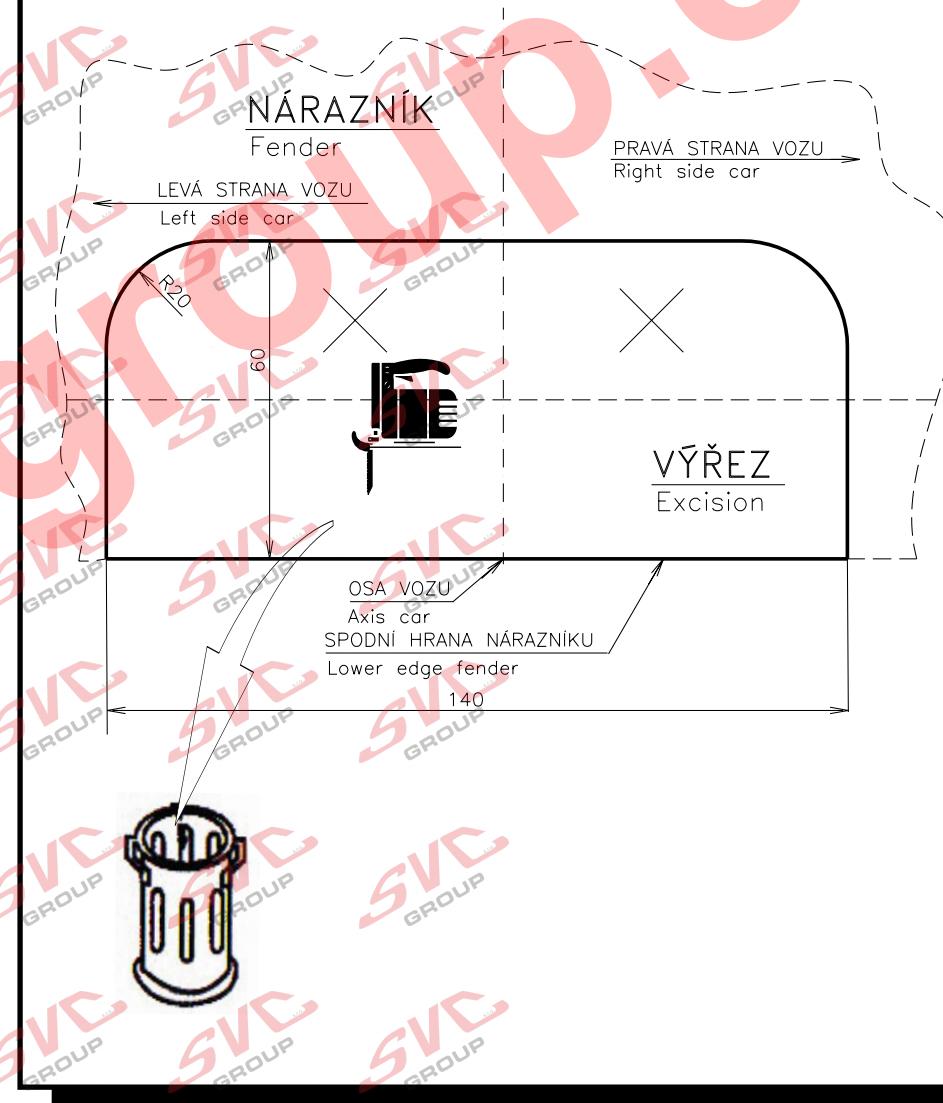

- 1 Remove insulating material on a car body in grips and joints of a tow bar with a car body. Clean all drilled holes with anticorrosive agent and remove all metal shavings.
- 2 Keep ball hitch and all moving parts clean and grease them, use on friction areas and use original supplied plastic covering caps.
- 3 Use supplied mechanical strength jointing material.
- 4 It is recommended to retighten all fixing bolts and nuts after coupling device has been in use approximately 1000 km.
- 5 According to a law a ball hitch cannot cover a number plate.
- 6 Wiring of a tow bar must be up to a standard and car maker requirements (see a car manual or ask a car dealer).

The tow bar has been physically tested according to a regulation 94/20/EC and EHK UN No.55 and fulfills all prescribed ES regulations
